memorable. Need inspiration?

How to create a file or upload one in a Repository.

1. On GitHub.com, navigate to the repository home page.
2. In your repository, navigate to the folder where you want to create a file.
3. Above the file list, select the Add File drop-down menu, then click Create New File.

4. In the name field, type the name and extension of the file. To create subdirectories, type the directory separator /
5. In the File Contents text box, type the contents of the file.
